

# Secure E-Signature Management

DocVerify advances signatures to the modern age with a robust e-signature solution that is extensible to virtually any application in any paperwork-intensive industry. Now you can securely sign, store and manage 100% legally binding documents with the convenience of a hosted software platform.

### The Problem With Paper

Traditional signature methods have a host of problems. Documents need to be faxed, scanned, or mailed, and get easily lost or ignored.

### The E-Signature Revolution

DocVerify changes the way you do business. Our E-Signature solution makes acquiring all the signatures you need easy. Simply upload your documents to DocVerify, and specify the recipients. Your signers will be notified via email that there is a document they need to sign. With one click they can view the document, and sign with another. It's that easy! You have a signed, fully legal document back in your inbox within minutes. Think of how E-Signatures can transform your workflow. Save time previously wasted following up, scanning documents, and fussing with fax machines. No need to hand-deliver documents to ensure they arrived, or worry about which clients have signed which contracts. DocVerify allows you to see all signed and outstanding documents at a glance.

### Secure, Accessible Storage

Once your documents are signed, they're time-stamped, encrypted, and saved in the DocVerify VeriVault. You and your signers have read-only access to all documents, in one secure location. No more lost documents, no file cabinets, and no disputes over exactly what was

signed. You can even utilize the VeriVault as a protection for intellectual property. Because DocVerify guarantees the contents of every document you upload, you can prove that a piece of creative or intellectual property was created by a certain date and uploaded by you.

### Verify Document Integrity

The Federal E-Sign Act, UETA, and the European Signatures Act grant electronic contracts, records and signatures the same legal validity as those created on paper. They are also fully admissible and defensible in court. If you're ever asked to prove the integrity of documents that were signed, DocVerify can relieve the stress of a court case.

### Full Document Audit Trails

All documents stored in the VeriVault are accessible in a read-only format from any web browser. DocVerify enables you to see at a glance who has access to any document, a time-stamped viewing history, and when copies were downloaded.

### Easy To Get Started!

DocVerify is a hosted solution with no software to download, install, or maintain. You can register and upload a document to be signed in minutes. Signers don't have to register or pay to sign a document, ensuring easier signatures and quicker turnaround.

## How it works

### DocVerify's E-Signature is fast and easy to use:

1. Upload the document to be signed to DocVerify.
2. Specify the recipients that need to sign.
3. The signers receive an email and click on a link to view the document.
4. They click to sign the document.

...that's it! You then have a legally binding document signed and securely stored in DocVerify's VeriVault.

## Who's Using DocVerify?

**Sales Personnel:** Increase sales instead of chasing down signatures.

**HR Managers:** Speed the collection of tax forms, internal paperwork, NDAs, Noncompetes, and more.

**Notaries:** Increase revenue and ease record keeping with our E-Notary solution.

**Real Estate Agents:** Get mortgage documents and buyer agreements signed in minutes.

**Script Writers:** Document authorship of ideas.
