

## verivault™ Verification Platform

With the DocVerify VeriVault, prove that any document is identical to the original file that was uploaded and has not been altered in any way. The content and creation dates can be verified beyond doubt in a court of law.

### Secure Storage

Once your documents are uploaded to the VeriVault, they're timestamped, encrypted, and saved for read-only tamper-proof access anytime you need it. Only those you authorize can view or download items in your VeriVault.

### Flexible access

You can easily bring your documents up for reference, send them out to be signed, compare them to other copies, or prove their contents and creation date.

You have access to all documents and contracts in one secure location. No more lost documents, no file cabinets, and no disputes over exactly what was signed.

### Protect your IP

You can utilize the VeriVault as a protection for intellectual property. Because DocVerify guarantees the contents of every document you upload, you can prove that a piece of creative or intellectual property was created by a certain date and uploaded by you. Easily solve any disputes over authorship or ownership by proving exactly when your content was created.

### Unprecedented security

Documents in the VeriVault are kept individually encrypted and secure within

DocVerify's archives, and can only be viewed by those you authorize. Once your documents are stored, their contents cannot be changed. DocVerify documents are protected with 7 layers of document security, including time stamping, bar coding, encryption, and watermarking. Once a document has been secured by DocVerify, it absolutely cannot be altered or forged.

### Verify document integrity

The Federal E-Sign Act, UETA, and the European Signatures Act grant electronic contracts, records and signatures the same legal validity as those created on paper. They are also fully admissible and defensible in court. If you're ever asked to prove the integrity and authenticity of documents, DocVerify can relieve the stress of a court case or a simple dispute.

The DocVerify VeriVault is a secure, streamlined method of storing all your documents. Never worry again about backups, storage, or misplaced files.

### Easy to get started!

DocVerify is a hosted solution with no software to download, install, or maintain. You can register and upload a document to be VeriVaulted in minutes.

## How it works

### DocVerify's VeriVault is super fast and easy to use:

1. Upload the document that you would like to VeriVault
2. The document is time-stamped and encrypted so its contents are guaranteed
3. Your document is securely stored by the VeriVault
4. Anyone you grant access can view the certified document.

...that's it! You have a legally time-stamped document securely stored in the DocVerify VeriVault.

## Who's Using VeriVault?

**Entrepreneurs:** Securing sensitive IP before seeking partners

**Writers:** Documenting authorship of ideas

**Programmers:** Documenting proprietary code

**Photographers:** Securing copyright of images

**Inventors:** Documenting ideas and concepts before undergoing the patent process
